Tom,

Yes, I touched base with Kathy this morning and she thought the list would be OK to use. However, it sounds like you have some concerns about that list because much of the group hasn't been involved with projections previously. It's primarily the folks that have been giving input to the modeling process that we are trying to reach.

I agree that we need to get an announcement out very soon – I was hoping to do that today. I'll try to catch Marc this afternoon to get his suggestion on the best approach.

Alison

**Subject:** RE: Setting up call on new 2023 oil and gas projection factors and emissions

Hi, Alison - thanks for sending this note of clarification.

My perception is that you see this as "EPA's call" as you say will utilize other contact lists. We have a well-organized, planned-well-in-advance approach set up for the 100+ people invited to NOGEC calls. As I mentioned yesterday, looking back at least a year, there's been no previous outreach to the NOGEC on the O&G projection effort by EPA. It'll be a cold start for many on the NOGEC list.

So I've copied the others on the NOGEC Steering Comm. (Jennifer, Julie, Theresa, and Kathy).

Although the EIC is going on for you, Julie, Jennifer, and me - a "hold the date and time" E-Mail is something to be done, even if agenda and content are not yet clear. Short notice for

all of us, to be sure.

In the spirit of collaboration...

Mary,

I'm so sorry – I got you and Kathy Pendleton confused momentarily when I sent the email this AM... I realize that you are coordinating the Federal state WG calls, not the oil and gas workgroup calls. Chet had initially suggested we might also coordinate with you for the oil and gas call we are trying to set up, which is why I think I had your name in my head today. Sorry about that.

I know that you have a call with the states already set up for the 29<sup>th</sup>. Due to time sensitivity, we wanted to go ahead and get this oil and gas projection data out to the states before the 29<sup>th</sup> so they could start looking at it, so we couldn't do both at the same time. Also the audience for your calls is a little different. Although some questions could come up about the oil and gas projections on the call on the 29<sup>th</sup>.

So, I guess I need to go ahead and get back to Kathy Pendleton on this topic.

Thanks for your understanding and I'll "see you" on the 29<sup>th</sup>. J

Alison

**Subject:** Setting up call on new 2023 oil and gas projection factors and emissions

Mary,

Thank you for allowing us time to speak on the oil and gas WG call last week and for your insightful questions on the oil and gas WG call last week regarding how we will notify the states and RPOs of a call to share the new oil and gas projection factors and the resulting emissions. We have had a chance to discuss this internally over the past few days...

We plan to hold a call on Thursday, August 24 at 12 noon EDT on which states and RPOs can learn about the methods by which the new factors were developed and the resulting emissions by state. We plan to distribute some technical information on these topics before the call. The call-in information will be: 866-299-3188, code: 919-541-1850

We think that the oil and gas workgroup list would cover most of the interested parties on this topic, so we were hoping to use that list along with some other lists of state groups that might not be on the WG list. Do you have any issue with our using the oil and gas WG list? If you have suggestions of other interested parties that are not on your regular WG calls, we welcome those.

Thank you for your time,

Alison Eyth
